

Talk with your provider about your headache pain

For Cluster Headache and Migraine Patients

An important step to understanding how to better manage your pain is to have a conversation with your healthcare provider. Use this printable guide to help start the conversation with your healthcare team to see if gammaCore™ (non-invasive vagus nerve stimulator) is right for you.

How often do you experience headache pain?

- 1-3 times a month
- 1-3 times a week
- Once a day
- Multiple times a day
- Other*

*Specify: _____

How would you describe the level of pain of your headaches?

- Bothersome
- Painful but tolerable
- Very painful
- Extremely painful

Do you currently take multiple medications for your headache pain?

- Yes
- No

How satisfied are you with your current medications in treating the pain?

- Satisfied
- Somewhat Satisfied
- Not Satisfied

Are your headaches getting in the way of your daily living and activities

- Yes
- No

If you answered yes, describe the level of disruption you feel in your daily life.

- Not very disruptive. I can still go about my day.
- Disruptive, but I'll manage.
- Very disruptive. Getting through the day is challenging.
- Extremely disruptive. I can't function and I am often unable to work, go to school, commute, or spend time with others.

Would you be interested in a non-drug treatment option?

- Yes
- Maybe
- No

Take a look at the answers to your questions.

Is your headache pain impacting you more than you thought?
Are you satisfied with the results of your current treatment?
Are you interested in a non-drug treatment option?

Bring this guide to discuss with your doctor and ask if gammaCore may be right for you.

Choose gammaCore

gammaCore (nVNS) gently stimulates the vagus nerve to relieve migraine and episodic cluster headache pain and can be used adjunctively for the preventive treatment of cluster headache.

- Clinically proven to provide fast, sustained, reliable relief
- Demonstrated ability to decrease number of cluster headache attacks
- The most common adverse device-related events were mild and transient and occurred primarily during administration
- Safe to use with medications
- Portable, convenient, hand-held electronic device

Indication and Important Safety Information

gammaCore™ (non-invasive vagus nerve stimulator) is intended to provide non-invasive vagus nerve stimulation (nVNS) on the side of the neck. gammaCore is indicated for:

- **Adjunctive use for the preventive treatment of cluster headache in adult patients.**
- **The acute treatment of pain associated with episodic cluster headache in adult patients.**
- **The acute treatment of pain associated with migraine headache in adult patients.**
- The effectiveness of gammaCore has not been established in the acute treatment of chronic cluster headache.
- gammaCore has not been shown to be effective for the preventive treatment of migraine headache.
- Safety and efficacy of gammaCore have not been evaluated in the following patients:
 - Patients with an active implantable medical device, such as a pacemaker, hearing aid implant, or any implanted electronic device

- Patients diagnosed with narrowing of the arteries (carotid atherosclerosis)
- Patients who have had surgery to cut the vagus nerve in the neck (cervical vagotomy)
- Pediatric patients
- Pregnant women
- Patients with clinically significant hypertension, hypotension, bradycardia, or tachycardia
- Patients should not use gammaCore if they:
 - Have a metallic device such as a stent, bone plate or bone screw implanted at or near their neck.
 - Are using another device at the same time (e.g., TENS Unit, muscle stimulator) or any portable electronic device (e.g., mobile phone).

NOTE: This list is not all inclusive. Please refer to the gammaCore Instructions for Use for all of the important warnings and precautions before using or prescribing this product.

Available by prescription only. US Federal Law restricts this device to sale by or on the order of a licensed healthcare provider.
